

MIDI Converter output problem

Posted by William Blanc - 01 Jul 2012 01:12

MIDI converter saves output files as example.mid.mp3 and the soundfont only plays for 1 second, the rest is 1 instrument MIDI with soundfont rhythm track.

Hi William,

The output files will be named as *.mid by default and this can't be set.

Regarding the soundfont problem, we recommend that you should use the high quality soundfont with rather large size to avoid this problem.

We are not sure if "AV SoundFont" is what you mean when mentioned about "avnex supersound". Kindly be informed that AV SoundFont will be available after AV MIDI Converter is successfully installed. Because of some reason that this SoundFont can't be found, click [here](#) to download.

(The link will expire on July 9, 2012)

Here are also some recommended Free SoundFont Bank:

soundfonts.homemusician.net

www.sf2midi.com
