

I actually prefer 8.x over 9.x

Posted by Chris Barrett - 26 Feb 2016 00:51

I can't get my 9.x profiles to sound anywhere as good as they were in 8.x, primarily because I can't disable certain features. I would prefer to sound off the sound quality and vowel enhancer options, as well as the voice equalizer. I also noticed that I can't change the bitrate or number of channels on the driver. All of this makes it feel like a massive step backwards.

I agree, I got excited when I saw 9 was out but quickly went back to using 8 after one day of frustration
