

Problem with full version

Posted by Khalid Bhunnoo - 07 Apr 2016 19:47

Hello

Some weeks ago i had downloaded the free version of Av voice changer, Recently i have bought the full version and soon i had problems, The changer does not work in real time, I can only pre record and use the application to edit the voice, But while on Skype (after updating settings) it does not work, It seems for me that the microphone does not work in real time with the application i have set the Av correctly in my sound settings

Other changer works its only this one having problems

=====
