

sound card problems

Posted by Gregg Hungerford - 16 Aug 2011 15:21

Regardless of the settings I try in "preferences" I always get a message saying "Cannot open sound card. Your card may be in use by another application".

It's not.

This apparently doesn't work at all.

I couldn't test this in the trial version. It was disabled. Hmmm.

At this point, I've wasted money on a program that looks to me to be something that's really old, poorly documented and as far as I can tell, it simple doesn't work in on a modern computer.

I am publicly demanding a refund for this time consuming waste of bytes.

Hi Gregg Hungerford,

Please tell me:

what's Edition? Basic, Gold or Diamond? And build number?

what's kind of Operating system you use? XP, Vista, or windows 7?

Thanks.
