

Problems with Teamspeak 3

Posted by Jimbo - 04 Sep 2011 01:12

I have tried AV Voice Changer and followed all the guides but on Teamspeak 3 instead of changing just my voice it changes everyone else on the server too so everyone sounded like a robot when anyone talked and everyone could hear it. Is it supposed to do that?

depend much on the input voice because each voice is characterized on Pitch and Timbre, it is nearly impossible to change one's voice to a different sex and sound completely realistic.
