

VC not showing up in recording sound devices

Posted by John Martin - 20 Sep 2011 18:22

In Device Manager Avnex Virtual Audio Device is there but windows finds a problem with it:

'Windows cannot verify the digital signature for the drivers required for this device. A recent hardware or software change might have installed a file that is signed incorrectly or damaged, or that might be malicious software from an unknown source. (Code 52)'

Also it is not showing up in my devices. You know like when I right click on my speaker icon on the taskbar and go to recording devices. It is not there.

1. Uninstall VCS from your PC
2. Delete all packs of VCS from your PC

3. Re-download latest version of VCS 7.0 and try again exactly as instructed in the tutorial below:

support.audio4fun.com/tutorials/av-voice...ndows-7-32-bit-video

The VCSD application must be mark as Allow at least once for the activation process or you can turn off AVAST while VCSD is installing .
