

Loud hissing noise - solved

Posted by MJ - 30 Sep 2011 13:26

Running build 7.0.43 on Windows 7 64

Anytime I use the software on vent and teamspeak there is a very loud and constant hissing noise. I don't know if this is supposed to happen or if I have a setting wrong. The constant hissing isn't there when I listen to the voice inside of the program.

Also, another problem I am having is that when used with Skype the volume is very low. The mic as well as the volume in the program cannot be turned up any higher.

Try same as case below:

support.audio4fun.com/discussion-forums/...-noise-win-7-64-bit.

Settings in VCS before you use it with teamspeak or skype
