

## Can't install AVD driver - solved

Posted by Joseph - 27 Oct 2011 07:09

---

I downloaded the trial version of the program and I can't get it to work. The program installs and runs fine but it does not change my voice. I tried uninstalling and reinstalling it, and I noticed the Virtual Audio Driver driver does not get installed. I went into the installation folder and found the driver folder. I ran the drvinst.exe file (as referenced by the driver installation tutorial on the site). The command prompt window opens but it give an error:

```
C:\Program Files\AV Vcs 7.0\DIAMONDdriver>drvinst
```

```
SetupDiSetDeviceRegistryProperty failed with error 87: The parameter is incorrect.
```

```
Cannot set device identifier: VCSVADDS2DHW.
```

I'm not sure what to do to install the driver. Any help would be appreciated. Thanks.

- Uninstall the VCSD program
  - Run >> regedit >> Go to HKEY\_LOCAL\_MACHINE >> Software >> Find Avnex and delete it >> Next, go to HKEY\_CURRENT\_USER >> Software >> Find Avnex and delete it (Look at picture bellow)
  - Install the program again.
  - The VCSD program installation is finished >> Restart Windows
-
