

AV VCS and TeamSpeak 3 - Solved

Posted by avsp51745 - 04 Jan 2011 08:55

Hello.

I just purchased a copy of AV VCS Silver, and when I tried it out on TeamSpeak 3, my voice did not change. Is there any particular thing I need to do for the changes to work?

Thanks in advance.

Umm, so any update on this? Anyone know? Voice changer? Teamspeak 3? Not working?

Teamspeak 3 has a different setup then the one shown here in the tutorial, which is Teamspeak 2, I think.

Thanks in advance.

Open TeamSpeak 3

- Run TeamSpeak Client.
- Click Settings >> Options to open TeamSpeak's Settings dialog box.
- In the Settings dialog box, choose Capture.
- In the Capture section, choose Avnex Virtual Audio Device for Capture device.

- Click OK .

From now on, VCS Virtual Audio Driver will be the main audio driver recognized by TeamSpeak.

- Also, using a normal headset plugged directly into your sound card port is highly recommended.
