

poor quality...

Posted by 'bill faits' - 11 Feb 2012 04:19

i have the voice changer and it doesnt sound realistic, is there any options that actually help in that category? me and my freind are doing this yt series on trolling and i need to sound more feminine, he did vocal classes and told me too download a vc, this one is supposedly the best software wise but i cant make it sound real, how do i do it?

Hi Bill,

Voice Changer Software is a program that supports changing a voice to one another. It works as modifying your voice's pitch and timbre to archive the closest parameter to the voice you try to imitate. So please be aware that the quality of the output file is relative and depends on your input voice. Or you can try the Formant and Effect in Advanced Settings to enhance the quality.

By the way, we greatly appreciate your opinion. That encourages us to improve this software.

Regards

Nice advise from @Gab.

BTW, I'd also recommend that you should try changing the pitch and timbre not too much or too far from your original voice as each voice would sound best in a certain region of pitch and timbre only. So, when using much timbre and pitch, you may need to regain the natural level with the features like per in @Gab's advise.
