

can't install the vad driver

Posted by fuk hang cheung - 14 Mar 2012 15:11

i am using a windows 7 64 bit

and when i use vent, i cant find the vad thing,

so i look up in the forum,

i try to find my Avnex in regedit,

and i cant find any of it inside, even using the pictures in tutorials,

they just don't exist.

I don't think it was even installed,

although every time i press the install drive, it says:

Removed old device:Avnex Virtual AudioDevice (WDM).

Device: "Avnex Virtual AudioDevice (WDM)"installed successfully.

Is there a way to manually install the driver,

i have nod32 as anti virus and normal windows firewall on.

Hi,

Could you please try again follow exactly the below link and then feedback to us whether it works or not:

support.audio4fun.com/tutorials/av-voice...o-manual-install-vad

further information as follows required:

PC Configuration

1. What type of PC Desktop or laptop.
2. Operating System, Version, Patch level (e.g. Windows, XP, Service Pack 1 or 2, etc)
3. CPU Type and Speed
4. Amount of Memory.
5. Firewalls & anti-virus program in use? If so, which?
6. Type of headset in use?
