

I cannot record a test sound in ventrilo with voice changer.

Posted by Ken lee - 04 Jun 2012 11:24

I am using windows 7 64bit edition. I could hear my modified voice when I speak into my mic with duplex on. I've followed the instruction to install VCS diamond and VAD correctly and it is also the latest version.

However, I tried recording my voice by connecting to ventrilo, but there was nothing when I play back my recordings. I've attached a photo of my sound setting.

Can I get some help and verify that my voice is indeed changed on ventrilo?

Thank you in advance.
