

Fuzz Noise Win 7 64 bit - solved

Posted by avsp53601 - 01 May 2011 11:34

Software version: VCS Diamond 7

Operating System: Windows 7 Ultimate 64 bit

Mic: Logitech H330 USB Headset

Problem:

Constant buzzing scratching sound whilst ever the software is in the On mode. This happens whether a mic is connected or not. I have tried reducing mic gain but the problem only gets feinter. Also, the two audio bars are constantly filled to the end of the red zone. As i said, this happens even when no mic or any audio input device is connected.

Is there anything i can try to correct this issue..??

You can:

- Close VCS program

- Go to Control panel >> Select Hardware and Sound
- Select Manage audio devices >> In Sound windows >> Select Playback tab
- Right click in Speaker (AVnex Virtual Audio Device) >> Select Disable >> Select Apply >> OK
- Open VCS
