

Skype help

Posted by Chelsie Moore - 08 Sep 2012 07:37

When I use AV coice changer it works crystal clear and sounds real but when I talk through Skype I sound muffled and kind of robotic and they can't always understand me so I have to repeat myself quite often. I've tried 2 different microphones and they both have the same outcome. any help would be greatly appreciated. Thank you!

Hi Chelsie,

Regarding sound problem, please help us clarify the following details:

- * Which type is your headset?
- * Version of Skype? (Help >> About)
- * Did you make any change on PC Sound Setting?
- * Is there any antivirus program in use?
- * Beside the AV Voice Changer Software, did you try installing another voice changing application?

Also, you can refer to this FAQ for our suggested resolutions: support.audio4fun.com/faqs/av-voice-changer-how-when-running-vcasd
