

Installation on an off-line computer?

Posted by Dave - 28 Oct 2012 18:36

Hi

I'm interested in your voice changer for voice dubbing and was wondering if it was possible to install it to a computer that has no access to the internet. I figure I can transfer the app with a flash drive but what I'm worried about is forced registration/validation via internet connection.

Thanks

Dave

Hi Dave,

Thanks for your interest in our products.

Regarding your concerns, kindly be informed that the software may require the Internet for the activation and installation, unfortunately.

We are so sorry for the inconvenience.

BTW, please notice that the software needs to access the Internet only on installation and activation. To use the program later on, Internet connection is not a must.
