

AV Voice Changer Diamond doesn't install on Windows 7 64 bit?

Posted by Stephen Thomas - 10 Mar 2013 21:25

Can anyone help? I downloaded and installed version 7.0 today. I have Windows 7 64 bit. The installation program appeared to work. The it said it would install AV Virtual Audio Device. A DOS box appeared for a second or so, then nothing.... the installation appears to have aborted. No error message. Nothing. EXTREMELY frustrating. It doesn't tell me what went wrong. As far as Windows is concerned, nothing has been installed. Can anyone suggest what might going wrong?
