

How do you save after you use the voice mopher?

Posted by AL - 21 Mar 2013 01:13

Okay, I must be missing something here. I made a recording with my voice. I changed it using the Morpher tool and it has the change. Now I want to save the changed voice to an .MP3 but I can't figure out how to save the changed voice to an .MP3.

Your video shows how to change a recorded .MP3, but how do you save it after you use the morpher? Please help.

Here is the Audio-4-fun youtube video showing how to use it, but it doesn't show how to save it after you use the morpher? Any help would be great.

Hi,

If you want to apply the morphing effects to your own voice. After getting a satisfied result, you can go to Recorder to record your morphed voice. Here is how: [Record your voice and save it in WAV format](#)

If you want to apply the morphing effects to a batch of audio files, we recommend the Morpher module. For details, [Morph multiple files](#)

Cheers
