Hi,

With version

We recommend you to make upgrade to Voice Changer Software Diamond 7.0 (VCSD7) for Virtual Audio Driver, which will be set the main audio input of any VoIP Applications and hence control the way you talk or chat.

For how to make VCSD7 work with Teamspeak3, please follow this tutorial [support.audio4fun.com/tutorials/av-voice...-software-diamond-70](http://support.audio4fun.com/tutorials/av-voice...-software-diamond-70)
