

Unable to properly install parody packs.

Posted by Julius Kwak - 21 Sep 2013 03:32

I have a full licensed version of VCS 7.0 Diamond and I cannot install parody packs that I've downloaded. The setup installer runs and does its thing, but it does not ask for a directory. So therefore it defaults to a directory that I do not know of.

I have concluded that my installation is not using a default directory.

I am using Windows 7, the notorious OS that has a [Program Files] and a [Program Files x86].

Hi Julius,

Could your please point us to the exact download links for those parody packs with that install problem?
