

## problems with delays in real time

Posted by david jiang - 22 Apr 2014 21:44

---

i ve tried 3 microphones already, the integrated mic in steelseries siberia forst blue, the blue snowflake, and a condenser mic hooked to scarlett 2i2 and all of them have about a second delay when using it real time. I was tried without the software and the delay is gone.

i am using i7 4770k

8gb ram

Im sure the computer performance is plenty. The delay is killing me because im trying to broadcast an act with both speech and singing and my voice could not line up with the other sounds ... which is kill me
