

problems with delays in real time

Posted by david jiang - 23 Apr 2014 11:40

There is always a second delay the time I speak and the time the morph sound is produced and this gives me a lot of problems. I am trying to live cast something and I found it troublesome because I can't match my voice with the rest. Does anyone know the fix?

headphones: Steelseries Siberia Forst Blue

mics: Steelseries siberia frost blue integrated mic, Blue Snowflake, Scarlett 2i2 + condenser mic and dynamic mic

processor: i7 4770k

ram: 8gb

I don't know what other information is needed.
