---

Hello, I've spoken support about issues trying to get voice comparator working properly and we discovered I had an issue with my microphone. I still haven't been able to fix it and it might be damaged completely. I have gone out and bought a headset but the old mic is still being used.

Anyways, I was hoping that you could guys could just use the recording of my voice I attached and try to change it into a 30ish female voice that I can import, like you were kind enough to do for another gentleman. My voice cuts out here and there but there is nothing I can do about it. If you need me to try another recording please let me know! Thank you so much!!!
