

## Image Video morphing using audio signal

Posted by erikbojerik - 20 Oct 2012 19:29

---

I would like to see an app that takes user-uploaded images and video and morphs them driven by a frequency or amplitude modulated envelope from an input audio signal. Killer would be an XY morpher with 4 images or videos at the corners to morphed, with FM on one axis and AM on the other.

Video Morpher is a step in this direction.
